Please Amend the Claims as Follow:

1. (currently amended) A method of manufacturing a leaf display device made of naturally occurring broadleaf stems, each said broadleaf stem comprising a plurality of naturally attached leaves comprising a first, topmost leaf, a second leaf adjacent said first leaf, and a third leaf adjacent said second leaf, said method comprising the steps of:
 - A. Positioning said first leaf substantially co-linearly with said broadleaf stem;
 - B. Positioning said second leaf over said first leaf;
 - C. Positioning said third leaf over said second leaf; and
 - D. Continuing this positioning process on each successive leaf progressing along said broadleaf stem away from said first leaf until all leaves desired are stacked; and
 - E. Selecting which surface of each said leaf should be visible when viewed from a visible side of the stacked broadleaf stem, said visible side of said stacked broadleaf stem being a side of said broadleaf stem upon which said last leaf was stacked.
2. (canceled)
3. (original) The method of manufacturing a leaf display device of claim 1 wherein a width of said stacked broadleaf stem is substantially equal to twice an average width of the leaves comprising said finished stacked broadleaf stem.
